If you choose to participate, the online survey will be presented to you when you leave the Msdn Web site.

This enables animation, styling, binding, etc public static readonly DependencyProperty PermissionProperty =DependencyProperty.

wpf converter binding update

wpf converter binding update

Then add support for INotifyPropertyChanged to your ApplicationClass The class will look something like this:And the binding will look like this:Using this approach, you can change the CurrentUserPermission property dynamically and the bindings will update:Marked as answer by Linda Liu Thursday, February 25, 2010 8:24 AMAll repliesA binding has a "source object" and a "source property".

Then add support for INotifyPropertyChanged to your ApplicationClass The class will look something like this:And the binding will look like this:Using this approach, you can change the CurrentUserPermission property dynamically and the bindings will update:Marked as answer by Linda Liu Thursday, February 25, 2010 8:24 AMHi Eliezer Reis,Can you please show us your Converter which is setting the IsEnable property of a button in true and false in windows phone 8 ?Edited by Ashish India Tuesday, October 15, 2013 6:10 AM Gist was not proper so i edited my comment.. Register("Permission", typeof(Permission), typeof(Window1));If you have any question, please feel free to let me know.. Bind to a singleton object that has a dynamic property You can declare a property called CurrentUserPermission on your Application class (the class that derives from Application), since this is already a singleton.. Please remember to mark the replies as answers if they help and unmark them if they provide no help.

You are binding directly to the "source object" You are not specifying a path to a "source property"..

```
